**VB Source code for PC Remote Software**

The VB source for PC Remote project is now available for download..
I didn't get much time to comment it as everyone was eagerly waiting to get the code. So if you feel any kind of problem or if you get any doubt understanding the code then you may ask  in the forum.

Here is a screenshot of how the software looks like.. I have made several changes in the look and features of the software since i started working on it.. If possible then please do not remove the link from software
